

Intermittent Catheter Compass

PRODUCT GUIDE

Proudly developed by BrightSky, Australia's leading continence support destination

BrightSky[®]
AUSTRALIA

Using this Product Guide

Incontinence is a common condition affecting over 5 million Australians. “Urinary incontinence is experienced by 1 in 3 women, 1 in 10 men and 1 in 5 children in Australia.”¹ Many types of incontinence exist and there are a variety of options available to treat and/or manage urinary and faecal incontinence.

A continence assessment conducted by a continence advisor or urologist will help identify the most appropriate continence management plan for an individual.

Intermittent catheterisation should not be done without adequate training by a healthcare professional. Success with intermittent catheterisation is directly related to appropriate assessment and training to ensure correct selection and catheterisation technique. Frequency of catheterisation varies and will be determined by the health care professional.

The Intermittent Catheter Compass Selection Tool is designed to assist clinicians to select an intermittent catheter when a long-term continence management plan is required. This Selection Tool and Product Guide do not replace clinician assessment and treatment.

Although these products may be used in the situation of catheter-associated urinary tract infections (CAUTI), they do not replace traditional physician treatment methods. Where evidence is not available regarding recommended use, product peer opinion has been considered.

Correct catheter selection is needed to maximise client comfort and minimise adverse outcomes. The BrightSky Australia Intermittent Catheter Compass Selection Tool is used in conjunction with this BrightSky Australia Product Guide. More information on products listed in this Product Guide can be found on the BrightSky Australia website.

The products listed in this Guide are those that were available through BrightSky Australia at the time of printing and are subject to change. This Product Guide will be updated and new products added as they become available from product manufacturers.

The development of the BrightSky Intermittent Catheter Compass - Intermittent Catheter Product Guide by Kylie Wicks MN (Research), BHLth, Dip App Sc (Nursing), CNC, is acknowledged.

SECTION 1

Intermittent Catheter Compass Selection

Follow the Intermittent Catheter Compass Selection Tool to help you identify the type of catheter that best meets the needs of your individual client. Then refer to Section 2 to select an intermittent catheter of the required size and preferred brand.

This selection tool has been designed to assist health care professionals select the right catheter for a client when a urological or continence review has indicated the use of intermittent catheterisation.

This selection tool should not be used when indwelling catheterisation is required.
